

**Optimizing
eTravel
Management**

The goal of every mLINQS consultant is to *exceed* customer expectations by providing *superior* service. With the advent of eTravel, there is a well-defined need for agencies to optimize the planning, installation, implementation and modification of the initiative's systems and services. In response to this need, mLINQS has developed servLINQ, a comprehensive, cost-effective suite of inter-related professional services for government customers.

- Travel Consulting Services
- Technical Consulting Services
- Systems Development Services

Optimizing eTravel Management with servLINQ results in greater savings, increased satisfaction, faster deployment, and seamless integration of all the components that make eTravel a reality.

**Spectrum of
servLINQ**

Travel Consulting

mLINQS consultants are recognized experts in eTravel Management. Their expertise includes every facet of travel from traditional travel services and online booking to travel card and expense management, as well as payment processing. Our consultants know how to help customers select and implement the right eTravel solution to meet their unique needs, because they have also worked to develop and market successful systems and services worldwide.

Technical Consulting

mLINQS professionals augment customer technical staffs by providing an in-depth perspective of applications and services as they apply to eTravel. Their experience in software testing and acceptance testing, implementation guidance, training, database administration, and help desk support is unsurpassed.

Systems Development

mLINQS offers custom software development to fully support the eTravel initiative. This includes the expertise to write specifications and build custom applications for such needs as financial interfaces and management reporting systems. Our developers are focused on eTravel. They understand the importance of listening to customer-defined requirements, and have the expertise to translate them into cost-effective, real world solutions.
